Our planet has entered a new geological epoch, the Anthropocene, in which human activity overwhelms other sources of change in the planet’s evolution. What does it mean for humans to be a force of nature? Should we attempt to minimize our disturbance of great natural cycles or seize control of the Earth system? What would it mean for humans to use geoengineering in an attempt to regulate the climate? These profound questions can no longer be avoided.

Clive Hamilton is an Australian author and public intellectual. He is professor of public ethics at Charles Sturt University in Canberra and has held various visiting academic positions, including at Yale University. His books include Growth Fetish, Requiem for a Species: Why we resist the truth about climate change and Earthmasters: The dawn of the age of climate engineering, published by Yale University Press last year.
